

TANK DOSING SPEAR

The safe and easy way to dose tanks

The dosing manifold simply connects to the tank valve. The valve is then opened and the dosing tube inserted through valve ready for dosing.

Features

- * Ensures additive is inserted well past tank valve towards centre of tank
- * All dosing at ground level - no need to carry equipment (e.g. Sulphitometer) up on to catwalks
- * Allows injection of gas after dosing for more efficient mixing.
- * Solid stainless steel construction with high pressure food grade seals
